

William M Bashore

Bill is a Senior Research Fellow at Drillinginfo addressing technical challenges such as probabilistic decline curve analysis, production allocation, and multivariate statistical / machine learning analyses. Prior to his current position, Bill was the SVP of Global Analytics, where he built up the analytics business unit and initiated the play assessment product offerings. He continues to provide a technical role on the corporate Executive Leadership Team.

Bill came to Drillinginfo with the Transform acquisition. At Transform, he was the principal author of data analysis and multivariate statistics, waveform classification, many of the seismic processing options, and the original synthetics tools. Prior to Transform, Bill was VP of Exploration Services at Veritas after the acquisition of Reservoir Characterization Research and Consulting (RC Squared). Bill was the co-founder and CEO of RC Squared, where he was the principal architect of 3D stochastic property modeling and seismic inversion and integration. Bill began his career after graduate school at Chevron, spending twelve years in a variety of positions in E&P operations and at the upstream research facility. Bill holds BS degrees in Geophysics and Geology and an MS in Geophysics from the University of Utah. Additionally, he has an MBA from California State University – Fullerton.
